

Customer Journey Map — From Uninsured Vehicle to Insured Customer

The vehicle owner’s experience across the full lifecycle: detection → notice → decision → purchase → onboarding → renewal

Use Case: AI detection of uninsured vehicles (cameras + insurance-database checks) · India · context verified August 2026 · Customer = the vehicle owner/driver

STAGE	1 · Unaware & Uninsured Pre-detection	2 · Detection ANPR + database check	3 · Notice + Offer The pivotal moment	4 · Consideration Decision	5 · Purchase & Onboarding	6 · Retention & Renewal
Customer goal	“Just drive — insurance isn’t on my mind.”	(Nothing — this happens in the background.)	“Understand what happened and how to fix it.”	“Get compliant quickly and cheaply, no hassle.”	“Buy cover in minutes and clear the notice.”	“Stay covered and never get caught out again.”
Actions	■ Drives daily ■ Policy lapsed or never bought ■ Unaware of the risk	■ Passes an ANPR camera at a signal, toll or fuel station ■ Plate read & checked	■ Gets the govt e-challan / compliance notice ■ Sees a clearly-labelled “get insured” option beside it	■ Taps the offer ■ Compares insurers in the open marketplace ■ Checks price & cover	■ Picks a policy ■ Pays by UPI ■ Policy issued; notice cleared	■ Uses the cover ■ Gets renewal reminders; renews ■ Refers friends & family
Touchpoints & channels	■ None — not in-market, no trigger	■ ANPR camera (invisible to the customer) ■ IIB / VAHAN lookup	■ Govt SMS · mParivahan · DigiLocker ■ Sponsored offer link	■ Marketplace page / app / WhatsApp ■ Side-by-side offer comparison	■ 2-minute checkout · UPI / DBT ■ DigiLocker policy storage	■ Renewal reminders (SMS / app) ■ Loyalty & no-claim benefits
Emotion	The graph shows an emotion curve across six stages. The y-axis represents emotion levels, with 'Indifferent' at the top, 'Unaware' below it, 'Anxious' at the bottom, 'Hopeful' below that, 'Relieved' above that, and 'Secure' at the top. A blue line connects six points: a grey dot at 'Indifferent' (Stage 1), a blue dot at 'Unaware' (Stage 2), an orange dot at 'Anxious' (Stage 3), a teal dot at 'Hopeful' (Stage 4), a green dot at 'Relieved' (Stage 5), and a dark blue dot at 'Secure' (Stage 6). A light orange shaded area covers the bottom half of the graph, labeled 'the emotional low — design focus'.					
Pain points & risks	■ No reminder or trigger ■ Buying feels intimidating	■ Stale data or a misread could wrongly flag an insured driver	■ Feels punished ■ “Is this a scam?” ■ Confuses govt notice with an advert	■ Choice overload ■ “Is the link genuine?” ■ Affordability worry	■ Payment failure ■ Unsure the challan is really cleared	■ Renewal friction; forgetting ■ Price creep at renewal
Opportunities — what the platform does	■ Pre-emptive lapse reminders (where consented) ■ DOOH awareness at junctions	■ Real-time IIB/VAHAN check ■ Confidence filter + human review before any notice	■ Calm, non-punitive wording ■ Unmistakable govt-vs-insurer separation ■ Easy “check / dispute” link	■ Plate pre-filled → instant quotes ■ Transparent comparison ■ Win on price, UX & local language	■ Instant e-policy to DigiLocker ■ Auto-update compliance status ■ Clear “you’re now compliant” message	■ Auto-renewal & early reminders ■ Loyalty / NCB ■ Cross-sell (health, 2-wheeler); referral nudges

Emotion curve: ● Unaware ● Low point (the notice) ● Loyal & secure — the shape to engineer: a **shallow dip** and a **steep recovery**.

Two-layer rule. The government issues the compliance notice (Layer 1). The insurer offer is a separate, clearly-labelled marketplace (Layer 2). Never blur the two — no advert dressed up as a government message.

Accuracy guardrail. Real-time data check + latency buffer + human review before any notice goes out. No insured driver should ever receive an “uninsured” message — the fastest way to lose public trust.

The whole design turns on Stage 3. The official notice is an unavoidable emotional low (shock, annoyance, suspicion); the platform’s job is to **keep that dip shallow** — through accuracy, a calm non-punitive tone, and a clear separation of government notice from insurer offer — and to make the **recovery steep** — a two-minute, plate-pre-filled purchase that clears the challan and confirms compliance instantly. Handled well, a moment of enforcement becomes a moment of relief, and an uninsured driver becomes a renewing, referring customer.
